LIST OF CONTENTS

NUMBER 1

	iii	Editorial
L. M. Kutt, A. B. Pifko, J. A. Nardiello and **J. M. Papazian**	1	Slow-dynamic finite element simulation of manufacturing processes
D. Chapelle and **K. J. Bathe**	19	Fundamental considerations for the finite element analysis of shell structures
C. Miehe	37	Comparison of two algorithms for the computation of fourth-order isotropic tensor functions
A. F. Bertolini and **Y. C. Lam**	45	Accelerated subspace iteration using adaptive multiple inverse iteration
S. M. Jeon, M. H. Cho and **I. Lee**	59	Aeroelastic analysis of composite rotor blades in hover
M. Ohsaki	69	Simultaneous optimization of topology and geometry of a regular plane truss
C. P. Pantelides and **X. Ma**	79	Linear and nonlinear pounding of structural systems
J. M. de Araújo and **A. M. Awruch**	93	Cracking safety evaluation on gravity concrete dams during the construction phase
T. T. Baber, R. A. Maddox and **C. E. Orozco**	105	A finite element model for harmonically excited viscoelastic sandwich beams
M. P. Alonso, J. A. Garrido and **A. Foces**	115	Application of BEM to solve two-dimensional thermoelastic contact problems with convection and radiation conditions
Y. W. Kwon and **R. E. Cunningham**	127	Comparison of USA–DYNA finite element models for a stiffened shell subject to underwater shock

NUMBER 2–3

G. Sheng and **B. Liu**	145	Modified Newmark method for head–disk interface dynamics
P. Tuğcu	155	Effect of axial loading on plastic buckling of long strips under pure shear
A. A. Atai and **A. Mioduchowski**	163	Equilibrium analysis of elasto-plastic cable nets
Kyeong-Hoon Jeong and **Seong-Cheol Lee**	173	Hydroelastic vibration of a liquid-filled circular cylindrical shell
J. A. Czyz and **S. A. Lukasiewicz**	187	Multimodal optimization of space frames for maximum frequency

60 356CO XL 1010
09/98 01-075-00 GBC

B. R. Widjaja	201	Path-following technique based on residual energy suppression for nonlinear finite element analysis
Purnima Jalihal and **Senol Utku**	211	Active control in passively base isolated buildings subjected to low power excitations
M.-J. Nollet and **B. S. Smith**	225	Stiffened-story wall–frame tall building structure
M. S. Ali, Z. K. Hou and **M. N. Noori**	241	Stability and performance of feedback control systems with time delays
Chang-New Chen	249	The warping torsion bar model of the differential quadrature element method
P. Krysl and **T. Belytschko**	259	Object-oriented parallelization of explicit structural dynamics with PVM
Xing-Hua Zhao and **W. F. Chen**	275	Effective elastic moduli of concrete with interface layer
Naum Khutoryansky, Horacio Sosa and **Wenhong Zu**	289	Approximate Green's functions and a boundary element method for electro-elastic analyses of active materials
S. W. Lee, J. W. Yoon and **D. Y. Yang**	301	A stress integration algorithm for plane stress elasto-plasticity and its applications to explicit finite element analysis of sheet metal forming processes
D. Lee, A. M. Waas and **B. H. Karnopp**	313	Analysis of a rotating multi-layer annular plate modeled via layerwise zig-zag theory: free vibration and transient analysis
J. L. Humar, A. Bagchi and **H. Xia**	337	Frequency domain analysis of soil–structure interaction
Chongbin Zhao, G. P. Steven and **Y. M. Xie**	353	A generalized evolutionary method for natural frequency optimization of membrane vibration problems in finite element analysis

NUMBER 4

R.-F. Fung and **R.-T. Yang**	365	Application of VSC in position control of a nonlinear electrohydraulic servo system
T.-Y. Chen	373	A comprehensive solution for enhancing the efficiency and the robustness of the SLP algorithm
L. G. Selna and **K. Kim**	385	Use of stiffness measure in nonlinear response analysis of concrete structures
H.-S. Shen	395	Thermomechanical post-buckling analysis of imperfect laminated plates using a higher-order shear-deformation theory

S.-R. Tzan and **C. P. Pantelides**	411	Active structures considering energy dissipation through damping and plastic yielding
J.-S. Wu and **P.-Y. Shih**	435	Moving-load-induced vibrations of a moored floating bridge
A. Dutta and **C. V. Ramakrishnan**	463	Accurate computation of design sensitivities for structures under transient dynamic loads with constraints on stresses
H.-C. Kwon, M.-C. Kim and **I.-W. Lee**	473	Vibration control of bridges under moving loads
J. Avilés and **X. Li**	481	Analytical–numerical solution for hydrodynamic pressures on dams with sloping face considering compressibility and viscosity of water
S. A. Dunn	489	The use of genetic algorithms and stochastic hill-climbing in dynamic finite element model identification
A. Tesar	499	The effect of diaphragms on distortion vibration of thin-walled box beams

NUMBER 5

A. Pramila	509	Coupling term makes temperature fields unsymmetric in laminated composite plates
Q. S. Li, J. Q. Fang and **A. P. Jeary**	513	Evaluation of 2D coupled galloping oscillations of slender structures
N. Arwashan	525	Matrix formulation for the calculation of structural systems reliability
O. K. Bedair	535	A contribution to the stability of stiffened plates under uniform compression
N. V. Nechitailo and **R. C. Batra**	571	Penetration/perforation of aluminum, steel and tungsten plates by ceramic rods
R. Casciaro, G. Garcea, G. Attanasio and **F. Giordano**	585	Perturbation approach to elastic post-buckling analysis
Rong-Fong Fung, Jeng-Sheng Huang and **Jau-Yang Yeh**	597	Nonlinear dynamic stability of a moving string by Hamiltonian formulation
J. Padovan and **J. T. Sawicki**	613	Diophantinized fractional representations for nonlinear elastomeric media
I. Babuška, T. Strouboulis, S. K. Gangaraj, K. Copps and **D. K. Datta**	627	Practical aspects of *a-posteriori* estimation for reliable finite element analysis

S.-E. Kim and W.-F. Chen	665	A sensitivity study on number of elements in refined plastic-hinge analysis
Hsiang-Chuan Tsai	675	Modal superposition method for dynamic analysis of structures excited by prescribed support displacements
L. Pan, D. O. Adams and F. J. Rizzo	685	Boundary element analysis for composite materials and a library of Green's functions
J. D. Richardson and T. A. Cruse	695	Nonsingular BEM for fracture modeling
H.-B. Hellweg and M. A. Crisfield	705	A new arc-length method for handling sharp snap-backs
	711	Erratum

NUMBER 6

O. Rand	713	Interlaminar shear stresses in solid composite beams using a complete out-of-plane shear deformation model
M. Tanaka, T. Matsumoto and A. Shiozaki	725	Application of boundary-domain element method to the free vibration problem of plate structures
M. C. Ray, R. Bhattacharya and B. Samanta	737	Exact solutions for dynamic analysis of composite plates with distributed piezoelectric layers
T. H. Tan, H. P. Lee and G. S. B. Leng	745	Parametric instability of spinning pretwisted beams subjected to sinusoidal compressive axial loads
J. Ryu, H.-S. Kim and S. Wang	765	A method for improving dynamic solutions in flexible multibody dynamics
R.-F. Fung, J.-S. Huang, Y.-C. Chen and C.-M. Yao	777	Nonlinear dynamic analysis of the viscoelastic string with a harmonically varying transport speed
M.-T. Chen and A. Ali	785	An efficient and robust integration technique for applied random vibration analysis
A. A. Yazdani, A. Gakwaya and G. Dhatt	799	An improved superconvergent patch recovery technique for the axisymmetrical problems
P. F. Pai, A. N. Palazotto and J. M. Greer Jr.	823	Polar decomposition and appropriate strains and stresses for nonlinear structural analyses
Q. Jun and H. Norio	841	On the technique of shifting side nodes in isoparametric elements to impose arbitrary singularity

K. J. Fridley, D. V. Rosowsky and **P. Hong** 847 Time-dependent service-load behavior of wood floors: analytical model

S. Yuan and **Y. Jin** 861 Computation of elastic buckling loads of rectangular thin plates using the extended Kantorovich method
